In knee endoprosthesis, there's only one thing that counts: Precise cuts.

That's your goal, and to help you achieve this, we have developed the premium saw blades EVOLUTION (reusable) and KMS (disposable). These saw blades have

- a patented blade configuration and
- an extremely long service life.
- They are suitable for any power system and
- match the height of the corresponding sawing templates perfectly, thus minimising vibrations and material abrasion.

In short: All that's required for successful knee endoprosthesis is in your hands!
